ANCHORAGE COASTAL WILDLIFE REFUGE AND IMPORTANT BIRD AREA ACCESS POINTS

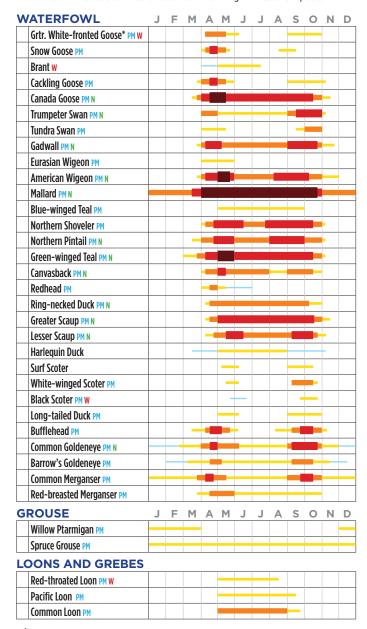

Strung between the Ship Creek industrial center downtown and the busy Seward Highway south of the city is the incredibly rich Anchorage Coastal Important Bird Area (IBA). It spans a 20-mile strip of coastal area including Ship Creek, Westchester Lagoon, Point Woronzof, Campbell Creek, south Anchorage, and Potter Marsh. It contains extensive tidal flats, marsh communities, and alder-bog forests. The southern three-quarters of this area lie within the Anchorage Coastal State Wildlife Refuge, managed by the Alaska Department of Fish and Game to protect wildlife habitat and allow for compatible public uses. Limited hunting is allowed on parts of the refuge (Potter Marsh is excluded), so take note if you are birding in the fall. Visit www.refuges.adfg.alaska.gov for more information on the refuge.

This narrow strip of valuable habitat along Cook Inlet supports some of the greatest numbers and diversity of birds in the Anchorage area. Bird enthusiasts have recorded approximately 220 species, of which about 160 occur annually either as migrants or breeders.

The Anchorage Coastal IBA was established for the large numbers of Sandhill Cranes, Snow Geese, Hudsonian Godwits, and Short-billed Dowitchers that stop during migration. Visit www.AudubonAlaska.org for more information about IBAs. Audubon Alaska uses science to identify and conserve important habitat for birds across Alaska, emphasizing public lands and waters. Potter Marsh, at the southern end of the IBA, is one of Anchorage's most popular spots for photographers and local birders, offering seasonal spectacles such as majestic Trumpeter Swans and one of Alaska's most accessible Arctic Tern colonies.

CHECKLIST KEY

- **Very Common:** Easily found in the right habitat and season
- **Common:** Found in the right habitat and season
- **Uncommon:** Found, with persistence, every year in the right habitat and season
- **Rare:** Seen in most years, but in small numbers
- Casual: Occasionally seen, but not every year
- PM Documented in Potter Marsh; may be seen elsewhere in checklist area
- N Documented nesting
- w Listed on the Audubon Alaska WatchList of declining or threatened species

 $[\]ensuremath{^{*}}\textsc{Tule}$ subspecies is on the WatchList, other subspecies are not.
